Projects

MessengerX: A web application for online chatting (Fullstack Development)

- Build the backend of the Login-signup authentication system along with various security technologies like "JWT" for token based authentication and modules like "BcryptJs" for password encryption.
- An interactive frontend has been made by using excellent frontend technologies like reactjs and tailwind-CSS.
- Used socket.io for establishing a reliable and fast client-server connection for as many users possible.
- MongoDB has been used for the storage of user information and all the conversations. I have used Postman for testing all the API routes in the backend properly.

Portfolio Website (Frontend Development)

- A personal portfolio website showcasing projects, skills, and contact information that has been made using ReactJs and Tailwind-CSS.
- Used framer motion and react icons to add animations and beautify the page.

IC-tester (Using PSOC board and hardware language, Embedded C)

- A testing model coded in "Embedded-C" to check whether an integrated circuit(IC) is working fine or not.
- A given IC, lets say IC-7401, has to be plugged onto the breadboard along with necessary connections with the PSOC board.
